

ABSTRACT

English learning method at SDN Cipagalo is a method where the teacher only explained theoretically. The material provided in the form reading, listening and writing. Listening materials delivered using speakers. While other materials deliver using student worksheets that have been provided. SDN Cipagalo using the curriculum of 2006. The assessment system in this school are using daily tests, midterm, active duty and exam grade. From a survey conducted, it is known that English learning systems at SDN Cipagalo is unattractive and make the students bored, so that the materials studied are not easily absorbed by the students. Therefore, in this study, an multimedia-based application for English learning was made, this application provide display with variety animations that can make the learning process more interactive. Features made in this application are listen to your teacher and repeat, find more TTS, reviews these answer the question, competency test, and match the picture. Once the application is built, UAT test was done on the user, which is an English teacher and the students, to determine whether the application is in accordance with the user needs. The test results are the English teacher satisfied with the applications offered, and at least 72% of students are satisfied with every learning features provide on this application. So it can be concluded that the application is in accordance with user needs, which are English teacher and students of SDN Cipagalo.
