

ABSTRACT

As the number of alumni of the University of Telkom, especially Prodi D3 Telecommunication Engineering, needed a means to obtain information of the alumni. But the media as a means of communication between alumni unfavorable, causing difficulties in finding information alumni data. Seeing this problem, the idea emerged to build a useful website to facilitate communication between alumni, discussion area, gathering and exchanging information. particularly Prodi requiring accreditation for the needs of alumni data.

The programming language used is HTML 5, to the display using CSS3 and jquery, and the database used is MySql and editor with XAMPP. Systems working on this information system is divided based on access rights. Admin as a server in charge of registering the alumni into the database, in addition to the admin can post news, job information, and discuss with other alumni, and get the alumni database. While users will be logged with the data already inputted by admin and must fill out a more complete personal data to be able to join the alumni forum. Users also can discuss in forums, chat, search for jobs, upload jobs, and get information other alumni.

From the test results information systems Forum Alumni D3 Telecommunication Engineering University of Telkom, based on the functionality that has been tested, the information system can run as expected. With this application is expected to simplify the alumni to establish communication with other alumni, particularly Prodi to get the alumni data in the accreditation process the majors.
