ABSTRACT

Tempo.co is website pioneer contains news and articles reporting Indonesia's news, which established since 1998. In 2008, Tempo.co reborn with all new features. Tempo.co not only could be accessed through personal computer, but also through smart phone device. The method that being used for this research is qualitative method with the approach of discourse critical analysis, Norman Fairclough's 3D model. The purposes of this research are, (1) to find out the linguistic aspect that are used in Tempo.co's reporting, (2) to find out what is the relation between Tempo.co's ideology and the linguistic aspect that resulted in reporting, (3) to find out political situation, social situation and what kind of cultural that as a background of linguistic aspect in reporting.

The result of this research shows the linguistic aspect is diction, the use of sentence, the selection of source in direct quote that Tempo.co used for placing figure or government officials in negative representation. Those things closely related to Tempo.co's ideology that stand to public or republic. So, the public used as consideration factor when report the news. Tempo.co try to see this issue critically by showed the shortage of the both side and exposing what they supposed to do. On creating this news was within 20 days from reshuffled part II based on that governor's incompatibility along minister's bad performance. After this part II reshuffled, the economical situation predicted will be better because the new minister considered more competent.
