

ABSTRACT

PT LEN Indusri are known as LEN, it is a electrical industry company that specialize in broadcasting, transmitting, signaling, defence electronic, energy & electronic power. To support their existance, company must improve quality of service, such as finishing project or job order on time and give good qualty of the job result. One factor that influence in getting good qualty of the job result are by improving process logistic in supplying material for project. In this final project, writer give suggestion of design information system of supplying material for project. So, by this information system performance dan quality of logistic activity will increase.

Design information system that suggested is made based on existing system, that are analize procedures of suplllying material, analize form input data, analize the job desk of person that contribute in logistic process. From the result of information system that suggested, logistic process will becomemore integrate (every person that include in logistic process can easilly & quickly to get information about process logistic) and efective (using infomation system will make job more easy to do, for example in inputing data and recapitulation data
