ABSTRACT

Bandung has many kind of tourism potention that may be enjoyed by tourists. The total tourist that stay in Bandung is increasing. Therefore, Tourism and Culture Department of Bandung are trying to increase the Bandung's tourism promotion. They are also giving more information about tourism potention. But the information that they offered is not enough, because there is no information about the visualization of tour object's location and tour supporting facilities.

Geographic Information System (GIS) is a tool that can be used for promoting Bandung's tour object and it's supporting facilities. MapInfo, a map-based software, is one kind of GIS software that can give information about location of tour object and it's supporting facilities. With the help of MapInfo, the process of searching a location can be done faster.

The purpose of this information system is for supporting the Tourism and Culture Department of Bandung's work, by making the updating data (spatial and attribute data) more simple, easier, and faster. In addition, this information system can visualize the location and data (spatial and attribute) about the tour object and tour supporting facilities.

Key word : GIS, tourism, tour object, tour supporting facilities
