

ABSTRACT

PT LEN Indusri are known as LEN, it is a electrical industry company that specialize in broadcasting, transmitting, signaling, defence electronic, energy & electronic power. To support their existance, company must improve quality of service, such as finishing project or job order on time and give good qualty of the job result. One factor that influence in getting good qualty of the job result are by improving process production planning and controlling. In this final project, writer give suggestion of design information system of production planning and controlling. So, by this information system performance dan quality of planning and controlling activity will increase.

Design information system that suggested is made based on existing system, that are analize procedures of production, analize form input data, analize the job desk of person that contribute in production process. From the result of information system that suggested, production process will become more integrate (every person that include in production process can easilly & quickly to get information about process planning and controlling) and efective (using infomation system will make job more easy to do, for example in inputing data and recapitulation data.
