ABSTRACT

Cicendo Eye Hospital is the only eye hospital which is owned by the government with its function of service, education and research specialized in eye health. Regarding of its function, Cicendo Eye Hospital gives several health sevices, one of them is morning polyclinic service. It is a service with a large range of process, cross-functional, and giving the greatest impact for the hospital's strategic importance. Nevertheless, there are complaints regarding the service itself, particularly about length time of the service. Therefore, business process improvement of morning polylicnic is has to be done.

Improvement is obtained through a value added analysis and utilization of streamlining tools by considering hospital's human resources, facility, and also technological factor, after previously having an understanding and efficiency measurement of the exisiting business process. As a result of the improvement, a proposed business process with a better level of efficiency is acquired. The comparison is shown in a table below:

Subprocess	Existing Business Process			Proposed Business Process		
	Activity	Cycle Time	Efficiency	Activity	Cycle Time	Efficiency
New General						
Patient	17	15,70	0,21	7	7,06	0,34
Registration						
Old General
