ABSTRACT

Using of information technology have come to requirement in supporting an activity. Computerize also be required in an business activity which aim to get advantage and do not limited to the size measure effort.

Dian Catering is family effort moving in service of catering and management of company canteen. Service of Dian Catering in management of company canteen still own a lot of feebleness, and most important is in management to coupon eat employees and inexistence of operation of good management, so that generate other problem such as forming coupon eat small and attenuate and easy to destroy and the amount which more than 1000 coupon eat can be difficulty in checking and make summary eat daily.

Designing this information system uses Linear Sequential model or with friendly says as Waterfall method which is have some steps, they are analysis, design, coding, and testing. This information system is developed using JAVA™ and DBMS MySQL. Using of id card employees in the place of coupon eat as a means of convert for the intake distribute to eat employees.

Hopped, that information system can be implemented by Dian Catering for giving better service.

Key words : Information System, Waterfall, JAVA™, DBMS MySQL.
