

## ABSTRACT

In the *Web - Based Games* development should not be separated by a Web Interface itself. Those *interface* including the main page (homepage), the login page and the game interface itself. Display of this game should be made as attractive as possible to attract gamers to play it. As for way to do is make the detail layout and display homepage as attractive as possible to gives good first impression.

The purpose of this experiment is make game interface more attractive and not being bored by players. So number of user that playing this game increased day by day. With this experiment can also know how attractive this game for gamers.

In the process of designing user interface for this game has been done usability testing to some users to determine the attractiveness user interface design. Result of the testing indicate that the user interface of this game earned an average score above 3 and the satisfaction value obtained score above 3. So it can be concluded that the user interface is pretty good and the game is quite interesting for the user.
