

West Java has great potential in the industrial field. Free trade access opens the way for Indonesia to market the domestic industrial products abroad without significant barriers. The opening of free trade would also threaten the sustainability of domestic production as goods from overseas can also easily enter Indonesia.

To help inform the industry to the general public especially the entrepreneurs then in this final project the application of industrial geographic information systems in West Java was made.

This application provides easy access to industry information online through a mobile phone. This application provides the industry information in West Java along with the name, address, production, and its location. On the user side, the user can search a large ones or UKM's information by entering the area and type of industry. Users can also get the latest news about the industry.

Keyword : geographic information system, mobile phone, industry, West Java
