

## **ABSTRACT**

*Public demand for an updated information is currently very high, miss a few hours of information could be considered not up to date. Read the news that can be accessed anywhere with a mobile device is helpful for someone who is busy, so we need quick access to read a news. With the advent of the android is open source-based operating system that allows developers to develop Android applications.*

*In this final project, made an application for information management news that contains an image and video information along with news. This application has a menu key features such as uploading images or videos along with news and information, read the news detail, see the video.*

*This application runs fine for a stable performance with heap memory usage ratio of 66.7%. This application runs fine used on 3G networks. To upload an image results would be better to use the 3G network showed an average upload speed of 11868.6 ms, to upload the video would be better to use the 3G network showed an average upload speed of 54962.6 ms.*

**Keywords :** *android, application, smartphone, internet, video, information, news*
