ABSTRACT

One of the graduation requirements for a student in a college is to complete the thesis or final project . Whether it's a design , analysis , and implementation is done by the students . In the process of settlement is needed guidance given by one skilled in the art or referred to the supervisor through face-to -face sessions . But in reality it is still found some constraints , both in terms of the lecturers and the students themselves . The most common obstacle is the difficulty of finding suitable meeting schedules of both parties . It is also an impact on the completion of the final project .

On the other hand, along with the rapid technological developments. Any current mobile phone technology is arguably very sophisticated with the emergence of smartphones. Therefore the application was created to minimize these constraints by providing an alternative, the final task in the process guidance, the final guidance of mobile applications with the help of the internet network connection on Android smartphone.

Final Guidance Mobile Applications has several features supporting guidance process in general, such as select a schedule, see the latest info from the advisor, select the schedule, make a note, see the guidance's resume and guidance with advisor. All these features can be implemented with the help of the internet network connection.

Keywords : final project, thesis, mobile, Android.
