

ABSTRACT

KSD is a fast food company which quickness and quality in delivery and service has become their priority, but they still have some problem in managerial sector they had no had standard system to manage employee , salary, menu stock data. And there were not automatic system in employee presence system which has influence in salary calculation . In stock monitoring system they still use the human prediction , there weren't automatic system that manage transaction data and money report .

In this final task will be made "Managerial Application Web Based", it's a web based application which's made with CI PHP based framework with SQL as database system has some features to manage employee , salary , and menu datas . Employee presence system with finger print scanner that's processed so that influence for employee salary. Stock Monitoring system with coordination between Managerial App and Order App , so it can be known that some menu will be in minimum limit, it can keep the quality of product and service even increase them . transaction data will be archived automatically as daily , weekly , and monthly money report that can be downloaded in pdf format .

This application can help to increase the company performance effectively , even though this app still need more development.

Keyword : Web Based application, CI framework, PHP, SQL , Finger Printe Scanner
