

ABSTRACT

Zakat is obligatory for every Muslim. The whole society from the self-employed, employees are required to pay zakat if they have met certain conditions . Many conveniences have done now in the distribution of zakat , including many zakat institutions tasked to manage and distribute zakat .

Along with the development of information and technology especially in the mobile application, the users need more and more mobile applications to help their daily activities. Based on the user needs, the programmer took the initiative to create a mobile application that is closely related to the particular mapping application of the zakat recipients. The application is a mapping application that uses the android that aims to facilitate the user in finding the location of zakat recipients around the user , knowing the location of the nearest zakat recipient of the user , giving directions for the user with A – GPS features .

This application is implemented in android as its operating system . And integrated with Google Maps as its map. This application will give the user the location of zakat recipients , recommendations of zakat recipients which are closest to the user , the search feature, and as well as information about the recipients of zakat in sub-district Dayeuhkolot .

This final project is expected to facilitate community and zakat manager (amil) to find the location of zakat recipients around them.
