

ABSTRACT

The advancement of technology in the service of selling tour packages in PT Travelia Sari Wisata must change the system of selling tour packages to be based on Android. During this time people who would like to book the tour package should come directly to his office in central Jakarta so it takes quite a long time. However, PT Travelia Sari Wisata now already have a sales system based websites (<http://www.traveliasariwisata.com>). On the website presented information on tourist places in the country to foreign countries. Such information includes the price offered for the leading tourist attractions, description of travel, and pictures from the tourist attractions. With the development of information technology as from time to time and also assisted with the development of the Internet network. By looking at these opportunities, the system designed by the waterfall model is to analyze the needs required in the process of selling tour packages such as the promotion of travel packages to the transaction. Based system is built using Android-based operating system, the Java programming language, open source software XAMPP, MySQL database, and assisted with webservice technology makes it possible to retrieve data from the application server and displayed in the form that is compatible on Android mobile. With this system is expected to help improve the promotion and sales process travel packages owned by PT Travelia Sari Wisata.

Keywords: Application, sales of travel packages, mobile devices, Android, SMS Gateway.
