ABSTRACT

The elementary school is a stage in education to got a higher level. Parent have a very important role in children's education at school, but the teachers have to replace their potition as long as the children or studens get a lesson at school. So communication is very important between teachers and parents to know more their chorecter's building and their achievement. The lack of communication are coused by their limited time. This final project made by using the method of prototype model atich allow the user to have a basic description about the program and also by doing a research base on working model. This application of system information is able for doing communication through online message and also able to manage the data of teacher, parents, students, studenst grade and school information.
