ABSTRACT

Abstract--Raudhoh Company is a Trading company that sells educational tools to make it easier for pre-school children to read. For sales transactions then the customer must be a member or member in advance in order to buy media education tool Raudhoh. In Raudhoh The process of recording transactions is still manual, customers can make purchases in cash or credit, due to recording transactions are still manual when customers do on credit then the sales must check one by one existing notes so ineffective than it is feared memorandum is not read or lost Which may cause harm to Raudhoh. The application will be designed to have a prototype method, the method by which the customer will provide an explanation of the desired kebutuuhan specifications and built using the programming language PHP and CI framework. The functionality of this application is to handle cash sales and credit, returns, know the stock, generate sales report, bill list of customers and trial balance. Based on black box testing and with manual testing then get the same results. So this application can help Raudhoh in recording cash sales and credit.
