

ABSTRACT

Production Recording in a manufacturing company is important because it can be known calculation of production cost of each - each product produced. But there is trouble is recording the cost of production using the book. This application is built with the background of the difficulty of calculating the cost of production for each - each product as it is still done in the conventional recording made at the time of production activities. Recording of production that is applied to the application using the full costing method. In this application developed using waterfall model approach. This application is built using the programming language PHP with MySQL database. This application is built for the calculation of the cost of production with a full costing method, and to produce accounting records in the form of journals, ledgers, reports the cost of production and profitability ratio.

Keywords: Applications, Production Costs, full costing method, Profitability Ratio
