

ABSTRACT

PT. telecommunication industry Indonesia (Persero) or abbreviated PT. INTI is the State-owned enterprises (SOEs) engaged in the telecommunications industry. At this time the flow of work practice participant acceptance still is done directly with the way the participant KP (work Practices) to meet the unit's personnel. Then the unit personnel placing participants in the KP Division/unit concerned. In addition to this monitoring process work is done directly and scheduled not resulting in delays in reporting on progress of work.

Based on the above problems then the Congressional Monitoring application that features the KP Participants registration KP KP, monitoring, checking the presence of KP KP employment report and submission. These features can be accessed by multiple users IE the personnel unit, KP participants, supervising field and academic counselors. This application is created by using the prototype method, programming language PHP and the MySQL database.

Based on the results of the Testing indicate Black Box testing results that feature that's been made is valid and can be used by the user. In addition, users also feel helped by the existence of this application. For example, a field supervisor can monitor the progress of the work of the KP participants, so that he can predict the target completion of the work.
