

ABSTRACT

Accreditation is an activity program eligibility assessment and education unit based on the established criteria. Accreditation is given to schools that are being fulfilled by Schools or Madrasahs, where standards are currently only standard 1 or standard content. Assessment of accreditation is based on evidence provided by the School or Madrasah.

Making an application is to help school or Madrasah in conducting simulation assessment of accreditation based on the evidence possessed. Currently, the simulation of accreditation assessment in School or Madrasah using Microsoft Excel can only be assessed based on the results that have been issued by the BAN-S/M, so that the School or Madrasah cannot be assessed according to standard price 1 and can not conduct quality evaluation (according Standard Characteristics 1). Applications that have been built can be used to be able.
