

## ABSTRACT

---

*Administrative tasks in the field of financial administration include financial management activities ranging from financial record revenue, expenditure to preparing reports. Including financial income derived from donations of school education development, construction and other money, while for the financial expenditure of funds expended to pay the salaries of the teachers, staff and purchase in accordance with the needs of schools that have been budgeted. Including financial income derived from donations of school education development, construction and other money, while for the financial expenditure of funds expended to pay the salaries of the teachers, staff and purchase in accordance with the needs of schools that have been budgeted. In general, the above activities performed manually without the use of special software by using the receipts for all transactions in the Make a payment and after receipt then made recapitulation menggunakan Micrisoft Excel. Seeing this problem, the idea emerged to build a "Web Based Application Management School Financial in MA PERSIS Tarogong Garut". The language used is PHP. The database used is MySQL. App users are administrators as admin and other access rights such as principals, heads of foundations, and the head of administration. The functionality in this application is the admin or administrators can record, report on school finances. With this application can handle the problems in the process of keuangan school management, and delivery of information bill in payment of fees to parents who have matured using SMS Gateway.*

*Keywords: Financial income, Financial expendses, Notice to Parents provide the due date of payment SPP.*
