

ABSTRACT

Linda Shoes is a company engaged in manufacturing. Linda Shoes Company is located on the road Cibaduyut, West Java. The company produces various kinds of shoes. There are two types of shoe sales in Linda Shoes is non-ordering and ordering shoes. Non-reservations are customers who come to Linda Shoes store and choose direct shoes in Linda Shoes after that can directly pay and amount go to sales. On the other side in Order Shoe, While the order is made and the customer comes to the store and order the desired shoes to the sales man representative, after that the sale will give how much the initial price will be paid by the customer and balance paid at the time of Completing order. Recording of income statement in Linda Shoes is still manual and has not been using the application. So many times, in the recording income statement there is mistake, or note-taking into the book is not appropriate. So, in this final project aims to produce an application that can manage the process of sales record in computerized or systematic manner. This application uses prototype method (Prototyping model) with Language Ci and MySQL database. The final project is entitled "Web-Based Sales Applications and Reports". This app can help to more easily create journal reports, ledgers, trial balance and income statement, so there is no mistake.

Keywords: Sales, Journal, ledger, profit and loss, CI, MySQL.
