ABSTRACT

Application of Learning Media Human Digestive System is merupan an application that explains about the human digestive system. This application is made for learning media for fifth grade elementary school students. Because of the limitations of the book in presenting examples of human digestion material, this application was created by presenting a dynamic example with 3 Dimensional multimedia support, varied colors and some animations for example. This application also presents an interactive evaluation in the form of quiz quiz. This app is created using Unity and Blender tools. This app uses the ADDIE method. This model uses the development stage of Analysis, Design, Development, Implementation, Evaluation. So from the development stage used, this model is often set with the ADDIE model. This application can help in the learning process of learning about human digestive system in SD Negeri Kutorenon 01 Kabupaten Lumajang.

Keywords: Unity, Blender, Multimedia, ADDIE
