ABSTRACT

PT. Trenggginas Jaya Bandung *is a company engaged in the field of outsourcing services. In the process of receiving candidates for employment services in this company still use the manual way in general, the employment applicants provide files - job applications and submit directly to the company. This will result in the loss of files or even damage to the files so they are not stored properly. Likewise with the process of distribution of labor services itself is a way to submit a proposal directly to partners / companies who have booked in advance and the company has been working with* PT. Trengginas Jaya*. While against the mita / company outside cooperation with* PT. Trengginas Jaya *is the way to promote the company first by going to the intended company. Reporting on the management of its workforce is still done by recording data in Microsoft Excel. It will also lead to loss of a data - data or important reports that must be archived. And handling for the services of the troubled labor is still done by the way the company made a direct complaint against* PT. Trengginas Jaya*. This is the basis for the creation of a Web-Based Employee Service Agreement Management Application. This application is created using prototype work method, CodeIgniter framework with PHP programming language. Mysql is used as database server and blackbox testing for application testing.*

Keywords: Outsourcing, CodeIgniter, Mysql, Prototype, PT. Trengginas Jaya*, CodeIgniter, Mysql, waterfall.*
