

ABSTRACT

Mother and child hospital is a health facility which gives special treatment for mother and children. RSKIA Kota Bandung is the only one mother and child hospital that owned by government in Bandung. It makes RSKIA Kota Bandung becomes one of the most hospital that chosen by society. In RSKIA development planning program 2013-2018 RSKIA Kota Bandung have been established as class B special Hospital. While the condition of RSKIA Kota Bandung nowadays still can not fulfill the condition of class B hospital because of some facility that has not exist. Because of that, the new design of RSKIA has to fulfill the condition of class B special hospital by adding the new facility. The site of the existing RSKIA building is limited. It makes the extend of RSKIA is have to be build in new site that can fulfill all the enquirement of RSKIA. The condition of RSKIA it self still has problem that experienced by hospital user. The problems are the facilities that have not adequate user needed such as the capacity of hospital room, circulation, chair availability and the other things that have direct impact to the comfortable of hospital user. The patient of RSKIA mostly considers of child and mother which all of them has a special needed in psychology comfort. A pregnant women usually have an unstable emotion despite of their pregnancy. It makes pregnant women usually feel insecure and get stress easily. A child whether in good condition or being sick commonly imagine hospital as a boring and fearful place. In the new RSKIA design, it have to emphasized the effort to fulfill the condition of Class B special Hospital and also give calmness stimulus for the patient and make children not scare to go to hospital through visual way

key word : RSKIA design, calm dan fun, psychologist approach
