

ABSTRACT

At the company Panca Bina Persada there are various activities in the company such as sparepart sales or spare parts recording is still done with the help of Microsoft Word or Microsoft Excel. In addition, employees there are required to recapitulate the whole process of spare part sales as well as recording spare parts in or out. With enough data it is very difficult to manage it because it will spend a lot of time to be able to solve it and currently the data management is done still using Microsoft Excel as a supporting application to manage and store the data.

In running its business PT. Panca Bina Persada has several obstacles such as making a sales recapitulation should look for sales memos stored in the dilemari then collected for recapitulation. So it takes time to look for it

Based on the description then PT Panca Bina Persada requires an application that can help resolve obstacles such as conducting the sale process, recording incoming goods and recapitulation reports of goods each month to be more effective. The solution will be made to help the existing problem that is made web based applications that use data base for data storage, and also create features on each functionality such as search, addition, and print reports. In building the application autor using the waterfall methodology is devided into four stage of needs analysis, design, coding, testing

Keywords: Recapitulation, sale of goods, recording of goods
