

## ABSTRACT

---

*The development of information technology is growth rapidly these days has entered almost all fields of life. One of the field of business services provide clothes washing or commonly referred to as laundry. Each laundry have their own way to improve delivery service laundry. Customers are also still difficulties in conducting delivery services because they use the telephone. Based on the existing problems needed android based applications by using google maps API that can help to improve the pick-up laundry services owned by laundry provider and help customers do the booking transaction. It is expected to have applications built to provide convenience to laundry service providers in the management of laundry and customers in booking a delivery service laundry.*

*Keywords: laundry, Android, website.*
