

## ABSTRACT

Math is one subject that is considered by some students as a difficult subject and terrible. Therefore, it becomes the cause lack of interest in mathematics so the learning achievement had to be decreased. Especially for junior high school students, the purpose of learning basic math to students so that students have the knowledge, attitudes and skills to increase knowledge in the field of mathematics and can apply it in everyday life. But the phenomenon is happening is a lot of junior high school students who scored less than minimum criteria exhaustiveness. One reason is the medium of learning math that tends to be boring and not interesting in terms of both visual and textual. Because that, the purpose of this research is to designing media learning about math with a good visually, interesting, unique, fun, and can increase students' interest in learning mathematics. In collecting the data, this study used qualitative methods such as observation, library research, and interviews. The results of the final design is the digital comics that contain materials simple math on line application webtoon for junior high school students. Because comics are the most effective media, especially to attract teenagers, especially junior high school students to the basic mathematics. In addition, increasingly sophisticated technology to change the habits of teenagers are more likely to use the gadget, so comic was created digitally and applied to the application line webtoon. The comics are expected to help students to learn and understand mathematics with a different method, more exciting, more interesting, more relaxed and more fun
