PT Smithindo Mitra Mandiri is a company engaged in the production and sale of fashion products such as clothes, jackets, pants, bags and other accessories. To be able to compete with competitor companies, Smith must be able to meet customer needs for good products and satisfactory service, thus demanding the company to have a structured distribution process. And support of information technology is needed to optimize the existing business processes in the company, for example is the use of technology in monitoring product delivery and in the implementation of business processes that diefektifikan with company systems.

The methodology used in the design of Enterprise Architecture is TOGAF ADM. The steps in the TOGAF ADM are performed starting from the Preliminary phase up to the Migration Planning phase.

The results of this research are EA design for PT Smithindo Mitra Mandiri, identification of proposed project and roadmap identification for enterprise IT development.

Keywords: Enterprise Architecture, Distribution, Retail, TOGAF ADM.
