

ABSTRACT

SPP Payment (Sumbangan Pembinaan Pendidikan) is a monthly fee for the student who attend private school, as also in MTs and MA Mathla'ul Huda. However, in that school the data collection of SPP payment is still manually or relying on book record and student's SPP card, then the school administrator still difficulties in data recapitulation and SPP payment report, especially in delinquent report. Then an application is developed by System Development Life Cycle (SDLC) method with waterfall model, using PHP programming language with codeigniter framework, for database management using MySQL, and SMS Gateway feature supported by SMS Gateway Me. This application will be able to help the school administrator in doing data collection of SPP payment, calculate recapitulation of SPP payment, SPP payment report which paid and arriers, and savings balance for students who want to save their money and SMS Gateway feature to facilitate school administrator in deliver of information to parents about the SPP payment, add saving balance, or take saving balance and student's arrears

Keywords: SPP payment, recapitulation, report, SMS Gateway, System Development Life Cycle (SDLC), waterfall model, PHP, codeigniter, MySQL, SMS Gateway Me
