ABSTRACT

This final project meant to build an Andro scanner application of detection *Malware*. Theseday, android platform have been one of the most popular operating system. One of the reason behind the success of android platform is their android market that provide the user with lots of application. The growth of android platform also followed by the malware that created to attack this operating system. Untill this time, the are tons of malware that can attack android. The ICT magazine says that android is really vulnerable target for malware. Kaspesky reveal that 99.9% detected on the mobile gadget from the first half of 2013 were designed to attack android phone, the Indonesian behavior of installing an app from unsecured source because of it is paid system makes the risk even worst. These application from unsecured source usually already injected with mallware. Andro scanner is one of scanner application that android user can use to detect malware from .apk type of file. The purpose of this application is to detect wether the file is infected or not.
