ABSTRACT

Sukapura village government in managing asset data is already computerized using Microsoft Excel, it still has the disadvantage that is not connected with data on another computer owned by Sukapura village. This asset inventory application is used to assist the village government in managing asset data without using Microsoft excel and requires multiple files to manage assets. So this application will help the village government in managing the assets. Making this application is done by waterfall method. Web-based applications and implemented with the CodeIgniter framework, PHP programming language, and MYSQL database as data storage. So this application can help the village government in managing asset data more easily.
