

ABSTRACT

Children with special needs are childrens who were born with different conditions from other normal children in terms of mental, sensory, and physical characteristics. Even though they have different conditions, every child gets the same rights especially in education, because through education it is expected that there will be a social equalization. Through the inclusive education program, childrens with special needs are entitled to get the same education without being differentiated. Inclusive education is a special education service system addressed to children with special needs in order to follow the usual education in class with his age friends. Bandung is one of the cities that has declared themselves as the city which supports inclusive education in 2015, this was delivered by the mayor of Bandung and supported directly by forming a working group of inclusive education programs. For two years, the inclusive education working group found several such problems like the uneven distribution of inclusive education, because those schools are not ready in terms of facilities and infrastructure and also the lack of socialization. SDN PUTRACO INDAH is one of schools that have implemented education since fifteen years ago, has 144 students and 80 of them are children with special needs, that make this school as a choice especially for parents of children with special needs so that the number continues to grow but not comparable with the number teachers. According to the headmaster other than the great trust to this school, lack of information and socialization to the community that this school is a regular public school and inclusive education can actually be implemented in every school are still lack. Because of that, the author is interested to lift the phenomenon of inclusive education into a documentary film with a duration of 10-15min. This film was made using a Canon Digital Single Lens Reflex(DSLR) type 60D and a condenser microphone to support audio and visual in order to get the best results as well as with FULL HD support.
