ABSTRACT

PT. Aplikanusa Lintasarta is a service company specializing in the field of information and communications technology provider. In handling the process of managing the petty cash fund is still using a manual Accounting records. All transactions of petty cash fund still recorded manually, so a lot of data petty cash fund inefficient. In addition to noting the petty cash fund is still common nominal recording errors in the book, so that the petty cash fund can not be controlled. Based on these problems the company needed an application that could manage a petty cash fund by using imprest fund method. This application was created with the web-based structured programming. This application is analyzed by using the DFD and made in the programming language PHP and MySQL database.
