

## ABSTRACT

---

*Sofyan Inn Specia Hotel is one of the service companies. In carrying out its operation Sofyan Inn Specia Hotel requires a large amount of fixed assets, from the initial acquisition to the moving of fixed assets there is no specific record of the company. At the time of acquiring assets and moving assets of this company still using manual process, the process takes a long time and is not accurate in the record. Based on the problems already described, a web-based application is created that can manage fixed assets from the beginning of asset acquisition and moving of asset so that at the time of recording does not take a long time and recording will be more accurate and efficient. This web-based application is built with object method with SDLC model development, designing using Unified Modeling Language, and using PHP programming language and CI framework to implement the result of the design. This application can handle all processes that occur on the fixed assets of the company, starting from the acquisition, placement, and moving of fixed assets accurately and efficiently.*
