ABSTRACT

Graha Mutiara Minimalis is a company engaged in the property, Management of material goods data in this company includes the management of material goods data entry and material goods out of warehouses whose recorders can still be assessed very less efficient because there are so many types of material there but the record Still using paper and also when new material is delivered to the warehouse the paper has to be taken from the office and very likely the paper can be lost. Seeing these problems arise the idea to build Web-based applications that can manage data incoming and outgoing goods can be stored into the database. This application is an application that facilitates the process of recording data of material goods in the warehouse, starting from recording data of incoming and outgoing goods and then printing a road letter to be proof that the workers have taken the material from the warehouse, uploading the purchase of goods received from the supplier, Expenditure and income of goods in each period. In this application, the method used in pengerjaanya that is using prototype method, then on testing the developer using blackbox testing methods and also the results of this application are expected to help the business processes running in the company pearl minimalist graha.
