ABSTRACT

Learning is a systematic process in which each component affects each other for the success of lectures in the learning process. This means that lectures need to interact with learning resources to achieve learning objectives. The parameters that most affect the quality of education is the learning process. Where in the learning process is influenced by the activity in the form of human resources, namely lecturers. Development the quality of education need to be evaluated dir in lecturing process. Support the evaluation of the lecture process required a system capable of managing the data and information available and become a container for the evaluation related to the lecturing process that is, Application of conformity evaluation of Lecture Delivery Method.

Development of this application using iterative incremental method with system based website. To facilitate further development, the framework used in making this application is Codeigniter Framework. Test method that is done using Black Box Testing method.

The result of this research is an application of conformity evaluation of lecture delivery method with the purpose of lecturing at Faculty of Industrial Engineering which has functionality as evaluation venue to support in data management and information about lecturing method used by lecturer at Faculty of Industrial Engineering. In addition, the application of this evaluation application is able to provide the evaluation to each lecturer in each subject he teaches. So that the evaluation of each lecturer can be done more easily and transparently.

Keywords : Framework Codeigniter, Iterative Incremental, Lecture Delivey Method
