ABSTRACT

"Minimarket Kita" is a minimarket which provides various items of basic needs at an affordable price, a comfortable shopping, as well as an easily accessible location. In managing payroll and employee presence raised some problems, recording the salaries and presence is still done manually into a book, which can cause many problems such as data loss due to lost or had with age, the error due to human negligence and so on. Therefore created a system to manage payroll and employee presence. The system is built using waterfall method with the programming language PHP and uses a MySQL database. Applications that have been built can be accessed anywhere and can be used to automatically calculate the salary based on the number of presence and position levels. This application has several functionalities: managing employee data, payroll data management and data management presence. The result of this application can be used as solutions to the difficulties often faced by the minimarket owner in organize employee's presence and payroll data so managing both data and serving information can done easier.
