

Abstract

Damage to public facilities is an important thing to be noticed, because public facilities such as elementary schools, mosques, orphanages and others are often used by the people. For that one way to solve the problem is crowdfunding.

Kita Bantu is an android based fundraising app. This application was created to help deal with damage to public facilities and has several features to support the fundraising and donation process, one of which is post buildings that need help with detailed location and description appropriate to the condition of the building. The existence of place verification by admin and transparency in the form of accountability report which contains comparison of building before and after donation can make people more trust to donate their money.

Kita Bantu application using payment gateways with mitrans and donation transactions can be done with online or offline. Survey data found that 30% of people who have tried to use this app say that overall this app is very good, 70% say good and 30% say pretty well. For the future we hope the application can be useful especially in crowdfunding and donation activities.
