Technopreneurship in Indonesia began growing. This is driven by the development of technology and information. With the advent of technopreneurship make businesses and business in corporate level to micro, small and medium enterprises are experiencing significant changes. These changes are based on ease of running a business and business activities. But these changes have not been evenly distributed in the various aspects relating to the community activities in Indonesia. As in the big cities, a product of the rise of science such as technopreneurship startup digital felt is still lacking. Many community activities in big cities done conventionally. But when looking at the development of technology that has been in existence, much information is easily presented in several online media or other media such as websites. Especially in large cities like Bandung, which has lots of employers and workers in a company. Do one of the activities that support business activities and their business, such as gatherings with colleagues, felt is still difficult. The usual thing they do is go to the activities related to the direct place of the meeting was to be the goal of booking a place because it is not uncommon to information available in several online media limited is the information and some of it is just the information that is opinion. This certainly is not a trusted information. Therefore, the need for a single product i.e. technopreneurship startup digital presents a complete and reliable information about a website-based meeting place for the sake of ease the problems they face. One of them is by analyzing and designing it first to a website that is able to solve the problem.

Keywords : technopreneurship, startup, digital, meeting place, website.
