

ABSTRACT

The application for filing a billboard is done by filling out the forms available at the DIPENDA office. Along with the development of technology made an application that can manage the billboard filing and its tax calculations. With this application the taxpayer does not need to come to the office of Dipenda to apply for the advertisement. This certainly can minimize the time of the taxpayer. Applications created have the fungsionalitas that can manage the filing and tax calculations and presents accounting reports in the form of journals, ledgers, notes count, and income per month. The method used in this application development is Unified Modeling Language (UML), Entity Relation Diagram (ERD). With the programming language used is Hypertext Preprocessor (PHP) and MyStructure Query Language database (MySQL). The test is done by blacbox testing method. The created application can manage the master data type of advertisement, advertisement location, size, and coa. With this application can facilitate the taxpayer in making a billboard application
