

ABSTRACT

PT. Pindad (Persero) is an industry and manufacture company that works in creating military product and is located in Jalan Gatot Subroto No. 517, Bandung, West Java. In doing the tax-cutting activity law article 22, it is still using Ms. Excel as its counting and data saving media which causes the waste of time in counting taxes activity and in noting debt. Even, the taxes that has not been paid is still using Ms. Excel. Meanwhile, PT. Pindad that is doing many transactions is indeed in need of an application that can help in those activities. Thus, a web-based application is made to help the process of creating stuffs as noted in a database and to help the process of counting which is the PPh article 22 cutting and serve tax report that automatically looks like in SPT report,

Proof of Collection Reports and Reports on Pick-Up Results, and to serve accounting report in the shape of accounting ledger and journal. This web-based application uses PHP (hypertext preprocessor) program language and MySql database, and in creating software, it uses structural type which is using ERD (Entity Relationship Diagram), and DFD (Data Flow Diagram), process specification and this application-testing itself is actually using the Blackbox testing

method. Keywords— Web-based applications, Procurement, Income Tax 22
