

ABSTRACT

Abadi Genteng Jatiwangi is one of trading company of building materials in Jl Soekarno Hatta 231 Bandung, West Java. The company is engaged in the trade and this company sells a wide range of building materials. In this company there are 4 employees, 2 parts staff and 2 others were drivers. When the stock inventory is running low, the employee will be ordered merchandise to the manufacturer according to the amount needed. Usually the number of items in the message adjusted with a capacity of one truck. 1 truck typically can accommodate 1000 tile. Goods will be delivered directly to the place. When the goods to the store clerk would perform payment transactions and record supplies that have been received into inventory purchasing reports and add merchandise on the card stock. Once the goods are received by the company, the store clerk will sign purchase invoices and delivery orders. Later purchases of merchandise payments can be paid cash or credit. The company has difficulties in implementing the inventory count merchandise and also when the transaction ordering lots of letters and bills scattered way. When making a purchase on credit, the company is still doing recording manually, so the company wanted a web-based application. Applications designed to manage inventory by FIFO method, card stock, ledgers, journals, listing the determination of debt maturity dates, the list of purchases that is expected to help the problems experienced by the company.
