

ABSTRACT

Recording of sales transactions and receivables management in a company is the most important thing. Because of the company's sales recording will know the benefits. Gesit Konveksi is a manufacturing company that produces clothes. The company manages sales system directly and through advertising on the internet. For the management of the company's own accounts receivable balances will know how many they have. If accounts can not be managed properly then companies may suffer losses. However, some companies are still many difficulties in managing receivables. This app was built to help sales and receivables management is computerized. Receivables management in this application using the aging schedule or receivable aging analysis method. This application was developed by using the method of Software Development Cycle (SDLC) and use the waterfall model approach. This application is built using the PHP programming language and MySQL database. And this app will generate accounting records in the form of journals, ledgers, sales reports, a list of accounts receivable and accounts receivable aging report.
