

## ABSTRACT

In the neighborhood around us there are food merchants, they are selling food by traveling or settled. Sometimes we're wanted some food from the food merchants, but the merchants are already past our house too far. Coupled with the ignorance of the buyer about the selling schedule of the merchants, make meetings between the buyer and the merchant is getting difficult. This is detrimental to both parties, as traders lost customers, and the buyer does not get the desired food.

With the development of today's technology, food order application "*Jajan Yuk!*" Made it easier for buyers to find out the location of food merchants who were in the vicinity of the buyer.

"*Jajan Yuk!*" is an Online food Order Application Based on Android that accompanied by GPS (Global Positioning System) Technology and have 2 kind of user (merchant and buyer). This application allows the user to see and buy the products from merchants in realtime via digital map. Merchants are divided into 3 types based on color. Blue color for settled merchants that cannot do delivery order. Red for settled merchants that can do delivery order. Yellow for traveling salesmen and could not do delivery. Payments made directly.

**Keywords:** *Jajan Yuk!*, GPS, android, food merchant.
