

## ABSTRACT

---

*The background of making market applications for website-based donations because of the problems faced by donations is the activity of recording donation data, data of donation goods, donation data, baseline data and donation data reports by donors through the website. Making this application aims to assist admin in managing donation data, and report data. The method used to manufacture the application is the waterfall method. Stages of waterfall workmanship is analysis, design, coding, and maintenance. This web application is built using the CodeIgniter framework, the PHP programming language, MySQL, Apache Web Server and editor tools using Notepad ++. These results can record donation data, donation data, donors data, foundation data, and donation data reports. In addition, this application can also facilitate donors to donate some goods that are still feasible to use.*

*Keywords: Donate data from donors and foundation, Codeigniter, Waterfall, Website*
