ABSTRACT

Students' activities nowadays are increasingly diverse due to the demands of companies that want the skills of students softskill more honed. In creating student's softskill capability, the campus invites its students to participate in various activities to support the abilities, such as joining the Association, Organization, Student Executive Board and Student Activity Unit. In such campus organization, of course there are activities that either large scale activities or small scale students will perform an event such as competitions, seminars, art performances and others who will need support from the campus, one of support in the form of borrowing facilities and infrastructure.

Loan facilities and infrastructure is an asset that can be utilized by students for free because it has been provided by the campus, it's just necessary to undergo some lending procedures. Infrastructure lending is still manually which certainly makes the staff have difficulty in managing loan data, tools data, building data, and report.

The purpose of making Web-Based Facility and Infrastructure Lending Apparatus in Bandung State Polytechnic is to facilitate the process of borrowing, building data management and tools, and approval. Benefits that can be taken from Loan Application Facilities and Infrastructure is the manager of the means to see manage the data of building and tools available. Infrastructure management can monitor the lending process undertaken by the students.
