

ABSTRACT

Mica plastic is type of PVC (Polyvinylchloride). Which it generally used in any fields, such as packaging for an accessories. Mostly in manufacture mica plastic normally have the form sheet. Most of mica plastic had used exploration and experiment devoid. The transparent character of mica plastic has potential to developed. The author interested in exploring the transparent material from mica plastic to be accessory of lifestyle product. That transparent character reminded author about preparation object under microscope which had seen microorganism, that suitable with Trend Forecasting 2016-2017 published by BD⁺A Design. Biopop discussed about synthetic biology improvement such as substantial invention which had. Solve the problem of world resources. Substantial of hybrid material supported by nano-technology able to produced electronic element from bacteria. Biopop is prospect to give excitement aura, created extensive playroom, dynamic, and exhilarate. Therebefore the author has made exploration with transparent mica plastic and apply to product as new variation.
