**ABSTRACT** 

Culture is something that is easily seen or known which is characteristic for a

particular region. Indonesia has 34 provinces, one of the West Java province which

have different cultures, such as music, dance, traditional costumes, and puppets

that identifies the province. Because of this, West Java has a culture very much, but

not necessarily all the Indonesian people to know the culture and history that is in

the province of West Java. Therefore, many media that is used to present

information related to the province of West Java, such as the internet, print media,

television, and so on. One is by using Augmented Reality technology that can

combine the digital world objects into the real world.

In this application, appearing in the form of three-dimensional objects. This

application runs on the android platform with a marker as a scanner for displaying

objects on the application.

The use of Augmented Reality technology for introduction to the culture is expected

to be a new thing in the information media in order to attract the public to know the

culture of West Java.

*Keywords*: culture, Augmented Reality, application, platform, android, marker.
