

ABSTRACT

Indonesia is one of the primary centers of diversity of bananas. Bananas become Indonesia's premier fruit commodity with the achievement of production of 6.1 million tons in 2012 sourced from the data of the Ministry of Agriculture of the Republic of Indonesia, in fact high banana production figures are not followed by processing on banana waste (banana peel) and currently only banana peel into an organic waste and into animal feed only. By making banana peel as the basic ingredients of food certainly can reduce banana peel waste and can be economically profitable, one of the innovation products from processed banana peel is bread fresh bread made from banana peel. The process of making banana peel is done by drying and grinding until it becomes a flour and when the process of making bread using the same process same as fresh bread in general but has a very striking color difference due to banana peel flour has a dark color characteristic that is brown. Bread made from banana peel flour can be received by consumers.
